About

An experienced Python Programmer with a strong background in Finance, Accounting and Business Data and Applications. Love to design and to analyze data through building applications and libraries that help to achieve that goal. Also have experience building teams and mentoring people to achieve their full potential. Uses Getting Things Done (GTD) as personal workflow and have kept a personal ledger for 8 years. If your data has symbols like these: '\$¢£€¥%', probably you would profit to have a coffee with me.

Jobs

Covalto, Inc. (Credijusto's holding)

Mexican Fintech Bank

Engineering Manager. Data Engineer. Technical Leader.

<https://covalto.com>

2022-05-01 - current

Location: Remote and Mexico City

Engineering Manager (Fincore/ESB Squad). Portfolio Migration Leader in all the quantitative data as consultant and Data Engineer.

- Achieved the Portfolio Migration from SOFOM to Bank successfully. 2 billion Mexican pesos (100 million USD). Migrating from SOFOM's in-house system LMS to Stefanini's Topaz in Banco Covalto. Regulated operation by the Comisión Nacional Bancaria y de Valores (CNBV, Mexican equivalent to SEC)
- Migration was necessary step to business growth and merger between Credijusto and Banco Covalto (former Finterra) and to get NASDAQ IPO
- Led the collaboration across all business areas and departments to gather the logic from legacy systems and the logic to target systems. Creating all the transformations in between.
- Wrote several financial math and accounting modules in a library to calculate, solve, split and do general work with amortization tables, cash flows, accounting, and payment application handling. Written in counterclock with hard deadlines. (More details on the projects section in this CV as pennyworth). Full Coverage. Data testing from source information and in delivered files.
- Wrote a library to abstract the Credit Contract to work, fill and share data. Writing multiple extractors to fill these Contracts from different sources: Loan Management Systems, Excel Files, Google Sheet Files, etc.
- Delivered normalized data to the business teams.
- Worked as Engineering Manager for a team of 6 engineers working with several legacy projects related to payments, financial quotes, loan management systems, and the Enterprise Service Bus components
- Improved productivity and metrics through communication and setting OKRs. Implementing Testing, Clean Code and studying and discussing with the team
- Worked as Engineering Manager for a team of 6 engineers working with several legacy projects related to payments, financial quotes, loan management systems, and the Enterprise Service Bus components
- Improved productivity and metrics through communication and setting OKRs. Implementing Testing, Clean Code and studying and discussing with the team

Credijusto

Small Business Lending Fintech

Python Data Engineer

<https://credijusto.com>

2020-02-24 - 2022-04-30

Location: Remote and Mexico City

Python/Django programmer working in the Financial Core (Fincore) team.

- Maintained and developed Loany, a Portfolio Management System that handles Loans and Leases' transactions and calculations. Using Django and React
- Refactored the Theoretical Table calculations to handle grace periods
- Maintaining Core Financial Libraries to handle calculations and settings across the company
- Designed and developed Kardex, a financial transaction database that allows to get reports gathering quantitative and qualitative data. (More details on the projects section in this CV).
- Audited all the Loan contracts to arrive to correct calculations and logic based on each subproduct (revolving and simple credit)
- Developed strong financial math and accounting skills to help Tech team to understand the financial team needs and provide solutions to major company problems
- Designed the Enterprise Service Bus architecture to message processes across multiple origin and target systems in a sequential process, inspired by the Django middleware architecture.

Cial Dun&Bradstreet México

Latin America's leading business data and analytics provider

Python Data Warehouse Developer

<https://cialdnb.com>

2018-10-01 - 2020-01-15

Location: Remote and Mexico City

Python Programmer working with Kubernetes managing clusters and designing APIs to control and integrate Cial's Data Collection workflow

- Designed APIs to glue stats, status and control of the tasks in the kubernetes cluster using python, FastAPI and Airtable as a convenient frontend interface (Hyperkube)
- Installed, Configured and Managed CialDnB's Kubernetes cluster with distributed storage. Configured Docker image to run the scrapers for collection purposes. (Ragnatela project)
- Helped refactoring the in-house designed distributed scrapy-based framework to collect results using redis as a distributed queue with middlewares to send to our data collection pipeline
- Wrote some scrapers using Selenium and Scrapy
- Designed Silk in Django. An API and management system for organizing the sources, schemas and tasks to collect data to feed the business users with Latin American companies' data in Portuguese and Spanish
- Working remotely and asynchronously with a team distributed in Israel, Croatia and Russia

Nextor Telecom

A telecom and telecom related software company.

<https://nextortelecom.com>

2014-08-10 - 2017-03-15

Lead Software Engineer

Location: Mexico City, MX

Lead developer and maintainer of Nextor Telecom's software infrastructure. It's portfolio includes products such as: Vozero, a prepaid VoIP conference service with a self-service user page to collect payments and manage conference calls in real-time; NextorProxy, a Cloud VoIP PBX service among others.

- Developed Experos a micro ERP for managing the company's administration
- Developed Mango Analytics a comprehensive solution for Call Detail Record, managing and processing large volumes of calls and storing and making available for search call recordings
- Developed a method to quickly setup and create webapps with REST, Django and Bootstrap.

informind

An IT and Software Consulting Company

2009-09-30 - 2014-05-06

Founder and Developer

Location: Mexico City, MX

Founder of Informind. Python Developer and Software Team Leader. Administrative consultant, Data Management Consultant.

- Company chiefly focused in Data management (Catalogue design and sanitation, Document schema design) and the installation of ERP systems in order to generate meaningful and useful information to the Finance, Administration and Executive departments.
- We offered to every small and medium sized business, solutions such as Websites, Apps, Servers and Networking consultant.
- Our vision was to offer: our customers, a quality and affordable all-in-one IT solution; our employees, the opportunity to learn and grow by offering tailored solutions that are valuable to our customer.
- Our customers were in the Manufacturing, Accounting, Commercial, Retail, Healthcare and Publishing industries.
- Remote support (telephone and mail) and in-site. Software and Hardware sales. Sales and project planning. Python software development. Software Architect. External Software implementation. Network design and implementation.

Main Projects

Pennyworth (Financial Math/Accounting Library)

Covalto, Inc.

A full-fledged multipurpose financial and accounting library

Designer. Python Developer.

financial data · financial math · accounting

- A library with modules to calculate interest, work with cashflows, handle payments, keep accounting, and calculate and solve amortization tables (schedules).
- Calculator: A module to calculate amortization tables given some parameters as interest rate, principal, duration, etc.
- Table Module: A Schedule table object to make calculations. Works dynamically ordering calculations as a linked list with caches since records depended on previous record values. Can do operations on it as tables' addition and subtractions, table splits into many tables (for multiloan tables), final payment adjustments, roundings.
- Solver: A solver working on the table module trying to imitate the GoalSeek module in Excel to change a value until getting another expected one as close as possible. Used to adjust interest rate to different method calculations, until getting zero in balance.
- Contract module: An abstraction to handle the Credit Contracts. Using a Contract-Version-Loan structure that contained all the information that the contract could have as IOUs, Payments, Advance Payments, Restructures, Write-offs, charges. Used as interchange format in business
- Kardex: A system to generate a Account Statement based on the Contract Structure and applying it to get the correct balance per different scopes such as loan, date, iou, version.
- Using numpy_financial, dataclasses, pandas, jupyter
- Developed from 2022-01-01 to 2022-12-31

Kardex (Loan Accounting System)

Credijusto, Covalto, Inc.

A system designed to make calculations on loans

Designer. Python Developer.

sqlalchemy · financial math · accounting

- Problem: Credijusto Loan Management system is a non-transactional system that register balances instead of transactions
- Main goal is to create a data structure that allows getting the different balances for each loan in any point of time aggregating all the transactions up to that day
- Connect to the existing systems, Loan Management System and CRM, to gather existing data and convert it to transactions
- Based on those transactions calculate the regular interest, moratories, penalties, fees and balances in time using different algorithms of calculation depending on rules for products while maintaining accounting consistency, and using debits and credits
- Develop connectors that allow us to fetch information from different sources and convert data to transactions
- Develop an accesible SQLAlchemy Python API to allow easy reporting
- Developed from 2020-08-15 to 2022-12-31

This CV (Personal Project)

Curriculum Vitae Production System

- A system that builds a Github page with my CV, including a PDF.
- Using resume.json format as the basis for storing the CV data
- Using jinja2 as template format
- Using SASS with a stylesheet that formats the template for screen and print media
- Developed from 2018-12-17
- <http://github.com/luisfernandobarrera/resume>

Experos (ERP)

Nextor Telecom

Custom ERP with Accounting Functionality

Backend Developer. Frontend Engineer. Project Owner and Manager.

- A micro-ERP with Invoicing, Purchases, Accounts Payable and Receivable capabilities to manage the company and automate processes, and eventually to merchandise it.
- Using Django-PostgreSQL, APIs and Knockout for developing mockups and allow frontend engineers to easily integrate it into a previously developed mocked up interface.
- Backend: Django, PostgreSQL, Django REST Framework APIs. M2Crypto, tablib, XML
- Frontend: Knockout.js Django.js. Bootstrap, React, Redux
- Integrations with Mexican Electronic Invoicing, Electronic Accounting and various banks and payment systems
- Developed from 2015-03-01 to 2017-01-15
